# The only limits are regulations

Our helicopters and their pilots become heroes of many stories every day. The most substantial are naturally those moments when health and a rescue of human lives are concerned. But also aerial works are a pretty challenge for us. We are holder of a permit to provide **aerial works** from the very beginning of our company formation and we have pushed forward a good deal of the limits of our activities in this sphere, in the course of 25 years.

We show the world from the most magical view for us at **sightseeing flights**. At observing **and measurement flights** we install thermal imaging cameras on our helicopters and thanks to them we can reveal various defects while flying round high voltage line or inspect gas pipelines. Along with helicopters and the latest technology we get totally new form of "vision". Almost like in a film.

We cope with **work with loads in the suspension, do aerial filming works and make air photography**, help at **work in forestry**, most frequently by liming to reduce the soil acidity, do **aerial firefighting** or climb into mountain heights and assist at ropeway repairs. A then we go down again a bit – for example, when installing air-conditioning on department store roofs.

When you lift your head while you are walking at the time of reconstructions, you may see our helicopter reaching **construction and installation** place of **work**. As the only Czech company we can operate our helicopter also in densely built up area.

Increasingly frequently we transport in our machines patients and the injured who are not in urgent danger of their lives - it is a case of **repatriation flights**, which you may use for example at a moment you broke your leg at skiing in the Alps and after the necessary medical treatment at the place you wish a medical treatment home in the Czech Republic.

We fly in all directions. **We discover and learn further directions** to spread our wings in our aerial work offer even more. Naturally, we always keep the strict regulations setting us the limits.

# What a crane cannot reach, our helicopter can

Aerial works are also about strong partnerships. We really appreciate our partnership with Air Zermatt, which shows that we have made our name in the world of aerial works.

## Besides other things because:

- we are holder of Aerial Work Operator Permit
- we use the whole company´s aircraft fleet to carry out Aerial Work
- we can arrange and install professional photography or video equipment (SpaceCam or FlightCam or Cineflex) on our helicopters for you
- our experienced pilots fly for picture taking, movie shooting or terrain scanning using our airplanes and helicopters always according to the customer´s requirements
- we deal with help at construction and installation work above towns as well as in landscape
- we can lift, in the suspension under the helicopter, loads up to 1,300 kg outside built up areas
- we lift loads up to 800 kg inside a town
- all our airplanes and helicopters providing commercial air transport are certified and we operate them in accordance with international aviation regulations
- all machines are maintained at the authorized maintenance centre

So we start into more and more complicated actions and our moment comes especially at that time when classic machines are at their wits´ end, such as in Prague where is unthinkable to close one of the main streets due to work, even though for half a day. Our helicopter arrives and we are finished in 10 minutes.

# We fly. And what's your superpower?

You are in the middle of an important meeting when suddenly a message comes that a production line got jammed. It means not only great technological but mainly economic troubles. You are aware that the engineers competent to fix the line are presently at several places at hundreds kilometres distance.

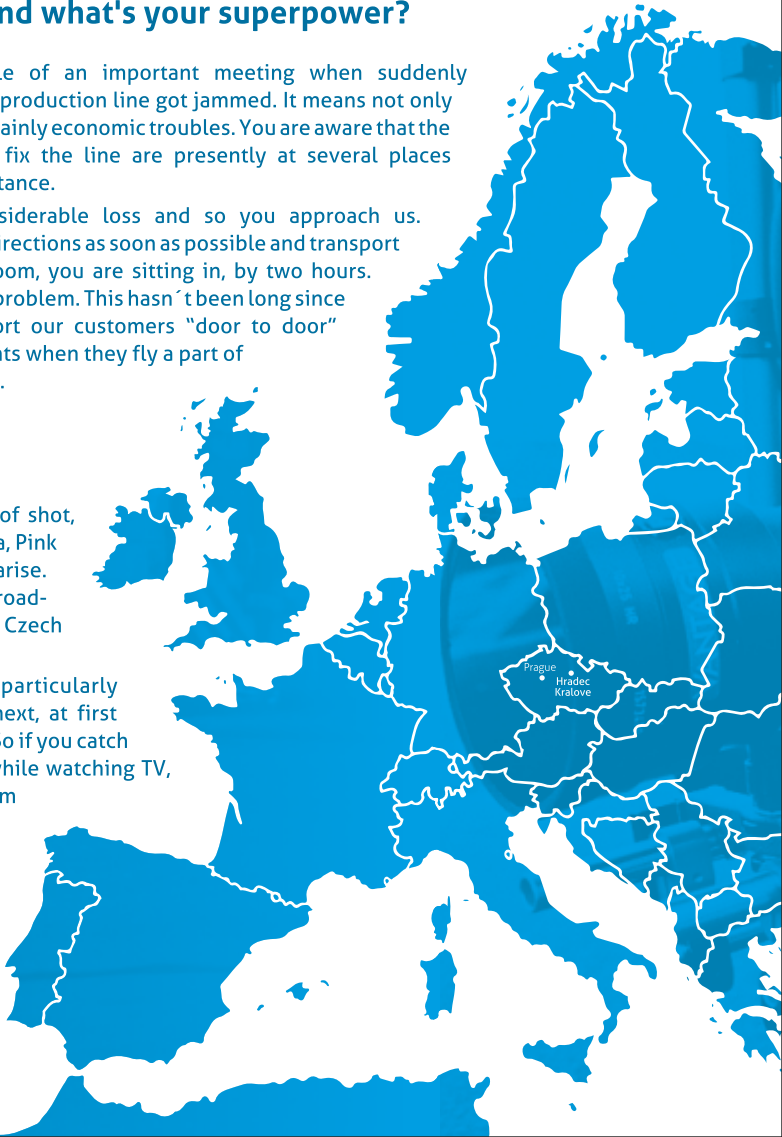

Every minute means considerable loss and so you approach us. Helicopters fly in required directions as soon as possible and transport you colleagues to a boardroom, you are sitting in, by two hours. And you can start solving the problem. This hasn't been long since scientific fiction. We transport our customers "door to door" and cope with it also at moments when they fly a part of their flight from foreign country.

## We are with you even when you are sitting at a cinema.

Although our helicopters are out of shot, scenes from the Chronicle of Narnia, Pink Panther or Casino Royal would not arise. We film also at home, sports broadcasts, reality shows or shots to Czech films and commercials.

We really like filmmakers, particularly because they come up with next, at first glance impossible challenge. So if you catch sight of any special effects while watching TV, which are possible to perform just from the height, remember us. You never know, where the wind (from propeller blades) blows from.

**Prove it.  
Fly with us!**
